It is sensible to have arrangements in place to ensure the consistency of Fire Risk Assessments in terms of the assessment of risk and mitigations proposed. In this regard Accent peer validate around 20% of reports, which are available within our audit system.

Risk Calculator - Fire

The following risk estimator is based on the general health and safety risk level estimator contained within BS 8800: 1996. Guide to occupational health and safety management systems.

1. Taking into account the fire prevention measures observed at the time of this risk assessment, it is considered that the hazard from the fire (the probability of ignition) at this building is:

LOW	X	MEDIUM	нісн		
-----	---	--------	------	--	--

2. Taking into account the nature of the building, the occupants, the fire protection afforded and any procedural arrangements observed at the time of the assessment, it is considered that the consequences for life safety in the event of a fire would be:

MINOR	MAJOR	X	CRITICAL	
WIINOR	WAJOR	X	CRITICAL	

The definition of the above terms is as follows: *FRA Review Frequency*

MINOR	Outbreak of fire is unlikely to result in serious injury or death of any occupant (other than the occupant sleeping in a bedroom in which a fire occurs).
MAJOR	An outbreak of fire could result in injury of one or more occupants, but is unlikely to lead to fatalities.
CRITICAL	There is significant potential for serious injury or death of one or more occupants.

3. The above estimates are then read into the following matrix table to give the overall risk level for the site:

Fire Hazard	Minor	Major	Critical
Low	Trival	Tolerable	Moderate
Medium	Tolerable	Moderate	Substantial
High	Moderate	Substantial	intolerable

When the level of risk is established, the action level can be read from the table below:

Asset ID: 9117

Old Station Court Station Road, Clitheroe

Risk Level	Guide to actions and appropriate timescales	
Trivial	No action is required	
Moderate	Efforts should be made to reduce the risk level and this should be carried out within the specified time periods.	
Substantial	Considerable resources may have to be allocated to reduce the risk level. It may be necessary to limit the occupation of some parts until urgent remedial action is taken.	
Intolerable	The building (or the relevant area) should not be occupied until the risk is reduced.	

The Overall Risk Level for this asset is:	Trivial
